Portfolio : https://dineshkumar49m.github.io

Hyderabad, India

Education

Bachelor's Degree: Computer Science and Engineering • 7.5

Adesh Institute of Technology - India

June 2012 – August 2016

Certifications

AWS Certified Solutions Architect - Associate

In Progress

HashiCorp Certified: Terraform Associate

In Progress

Technical Skills

Cloud Platforms

AWS (EC2, EKS, S3, EBS, VPC, IAM, ELB, Auto Scaling, SNS, CloudWatch, CloudTrail, Lambda, AWS Glue)

Containers & Orchestration

Docker, Kubernetes, Helm, Microservices, Containerization, Kubernetes RBAC

Infrastructure as Code & Automation

Terraform, Ansible, ARM Templates, Infrastructure as Code (IaC), Configuration Management

Professional Summary

Site Reliability Engineer (SRE) with 5+ years of experience in CI/CD automation, cloud infrastructure, containerization, and release engineering across healthcare and financial services. Proficient in AWS, Jenkins, Docker, Kubernetes, Terraform, GitHub Actions, AWS Lambda, AWS Glue, and Shell Scripting, with expertise in Infrastructure as Code (IaC), deployment automation, Linux administration, cloud monitoring, incident resolution, and cost optimization. Proven track record of building scalable, high-performance production environments, maintaining 99.99% uptime, and improving software delivery through reliable, automated CI/CD pipelines.

Professional Experience

Tech Neon Solutions Private Limited

Site Reliability Engineer SRE (AWS DevOps Engineer) — *07th May 2021 – Present*

Senior DevOps Engineer — *July 2023 – Present*

- Engineered and managed AWS cloud infrastructure (EC2, S3, ELB, Auto Scaling, IAM, CloudWatch) supporting enterprise healthcare applications with 99.99% uptime, ensuring availability, reliability, scalability, and performance.
- Designed and automated CI/CD pipelines using Jenkins, GitHub Actions, Maven, and Shell Scripting to improve deployment consistency, reduce manual effort, and enable reliable releases across multiple environments.
- Developed AWS Lambda functions (Python/Boto3) integrated with CloudWatch Events and SNS to automate EC2 patch compliance checks, snapshot cleanup, and cost-saving start/stop schedules, eliminating 4+ hours of manual operations weekly.
- Implemented Infrastructure as Code (IaC) using Terraform to standardize cloud provisioning, improve infrastructure scalability, and minimize manual configuration.
- Managed and optimized cloud environments with focus on system reliability, performance tuning, capacity management, security, and operational excellence.
- Administered and maintained Kubernetes clusters by developing Kubernetes manifests and Helm charts (Deployments, Services, ConfigMaps, Secrets, Ingress, and RBAC), reducing manual deployment effort by 50% and improving release reliability.
- Containerized applications using Docker and developed reusable images to support consistent deployments across development, testing, and production environments.
- Administered GitHub repositories, including branching strategies, access controls, and team permissions, while troubleshooting GitHub Actions workflow failures to improve build stability.
- Implemented monitoring and production support practices using CloudWatch and centralized logging solutions to proactively identify issues and maintain service reliability.
- Automated operational tasks using Shell Scripting, improving deployment efficiency, reducing repetitive manual activities, and accelerating operational workflows.
- Supported 24x7 production operations, incident management, troubleshooting, and root cause analysis (RCA) to improve system reliability and prevent recurring issues.
- Collaborated with engineering teams to upgrade and optimize Jenkins and SonarQube platforms, enhancing CI/CD performance and code quality validation.

CI/CD & DevOps

Jenkins, GitHub Actions, GitLab CI, Argo CD, Maven, CI/CD Pipelines, GitOps, Blue-Green, Canary, Rolling Deployments, Release Automation

Serverless & Data

AWS Lambda, AWS Glue, ETL Pipelines, Event-Driven Automation, Boto3, Python Scripting

Monitoring & Reliability

Prometheus, Grafana, CloudWatch, SonarQube, Alerting, Performance Optimization, Incident Management, High Availability

Operating Systems & Scripting

Linux (Red Hat, Ubuntu), Windows, Bash, Shell Scripting, Java, YAML

Databases

MySQL, SQL, PostgreSQL

Version Control & Tools

Git, GitHub, GitLab, Bitbucket, Jira

SRE & Production Operations

Site Reliability Engineering, Production Support, Troubleshooting, Distributed Systems, Networking (TCP/IP, DNS), Cloud Security (IAM/RBAC)

Interpersonal Skills

Excellent Verbal & Written Communication, Cross-Functional Collaboration

Hyderabad, India

Software Engineer Trainee *10th May 2021 – June 2023*

- Automated build and deployment pipelines using Jenkins, Maven, and Shell Scripting for regulatory insurance reporting applications across DEV, QA, and Production environments.
- Built and scheduled AWS Glue ETL jobs (PySpark) with Glue Crawlers and Data Catalog to transform and load regulatory reporting data from S3 into downstream databases, improving data accuracy and reducing manual data-transfer effort.
- Configured and maintained CI processes in Jenkins integrated with GitHub and Maven, enabling continuous delivery and faster release cycles.
- Coordinated with development teams to implement Git branching and merging strategies, improving source code management and collaboration efficiency.
- Deployed containerized applications using Docker and supported environment consistency across multiple deployment stages.
- Monitored application and infrastructure health using Prometheus and Grafana, enabling proactive issue detection and improved system reliability.
- Troubleshot deployment failures, release issues, and multi-component environment problems, minimizing downtime and improving operational stability.
- Participated in release management activities including build preparation, bug review coordination, and production deployment support on Linux platforms.

Projects

Health Care

- Engineered and maintained **24/7 uptime** for critical healthcare applications, including patient portals and diagnostic services, ensuring **100% compliance** with data encryption standards and enhancing patient data security across **50+** hospitals and life sciences organizations.
- Optimized monitoring of critical healthcare applications and integration services using CloudWatch and Prometheus, achieving a **40% reduction in MTTR** and consistently meeting stringent downtime SLAs for hospital systems through effective on-call incident response and root cause analysis.

Insurance Domain

- Designed and optimized the **WSPR application** for Liberty Mutual Insurance, enhancing the **efficiency of claims transfer** across DEV, TEST, and PRD environments, resulting in a **30% reduction in processing time** and improved regulatory compliance for **Workers Compensation Insurance**.
- Optimized the deployment and management of 100+ Amazon Linux and Ubuntu servers for regulatory insurance applications by automating build and deployment pipelines using Jenkins, Maven, and Shell scripting, resulting in a 35% reduction in release preparation time and significantly improving system reliability and performance through enhanced monitoring and troubleshooting.
